Lesson 03

In the past lessons we have:

- Thought about how pollution affects our school
- Collected our first dataset
- Analysed our first data to find out how people travel to school
- Made our first 'data graphic'

This is where you tell your story!

Reminder of your data challenge:

We want to reduce pollution – we can start at school

We want you to use data to convince pupils/parents to walk/cycle/bus to school

Now you have to tell your story

You want to make people go : 'ahhhh!...'

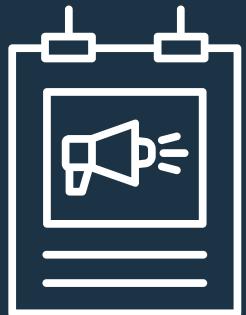

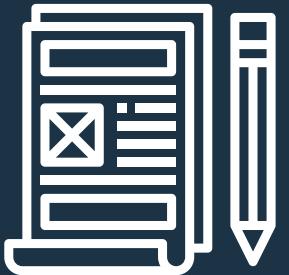

Datah!

Plan your story:

- Tell the challenge
- Show your data
- Tell us what your findings show
- Tell us what you think this means – is your school more or less polluted than others

Get creative!

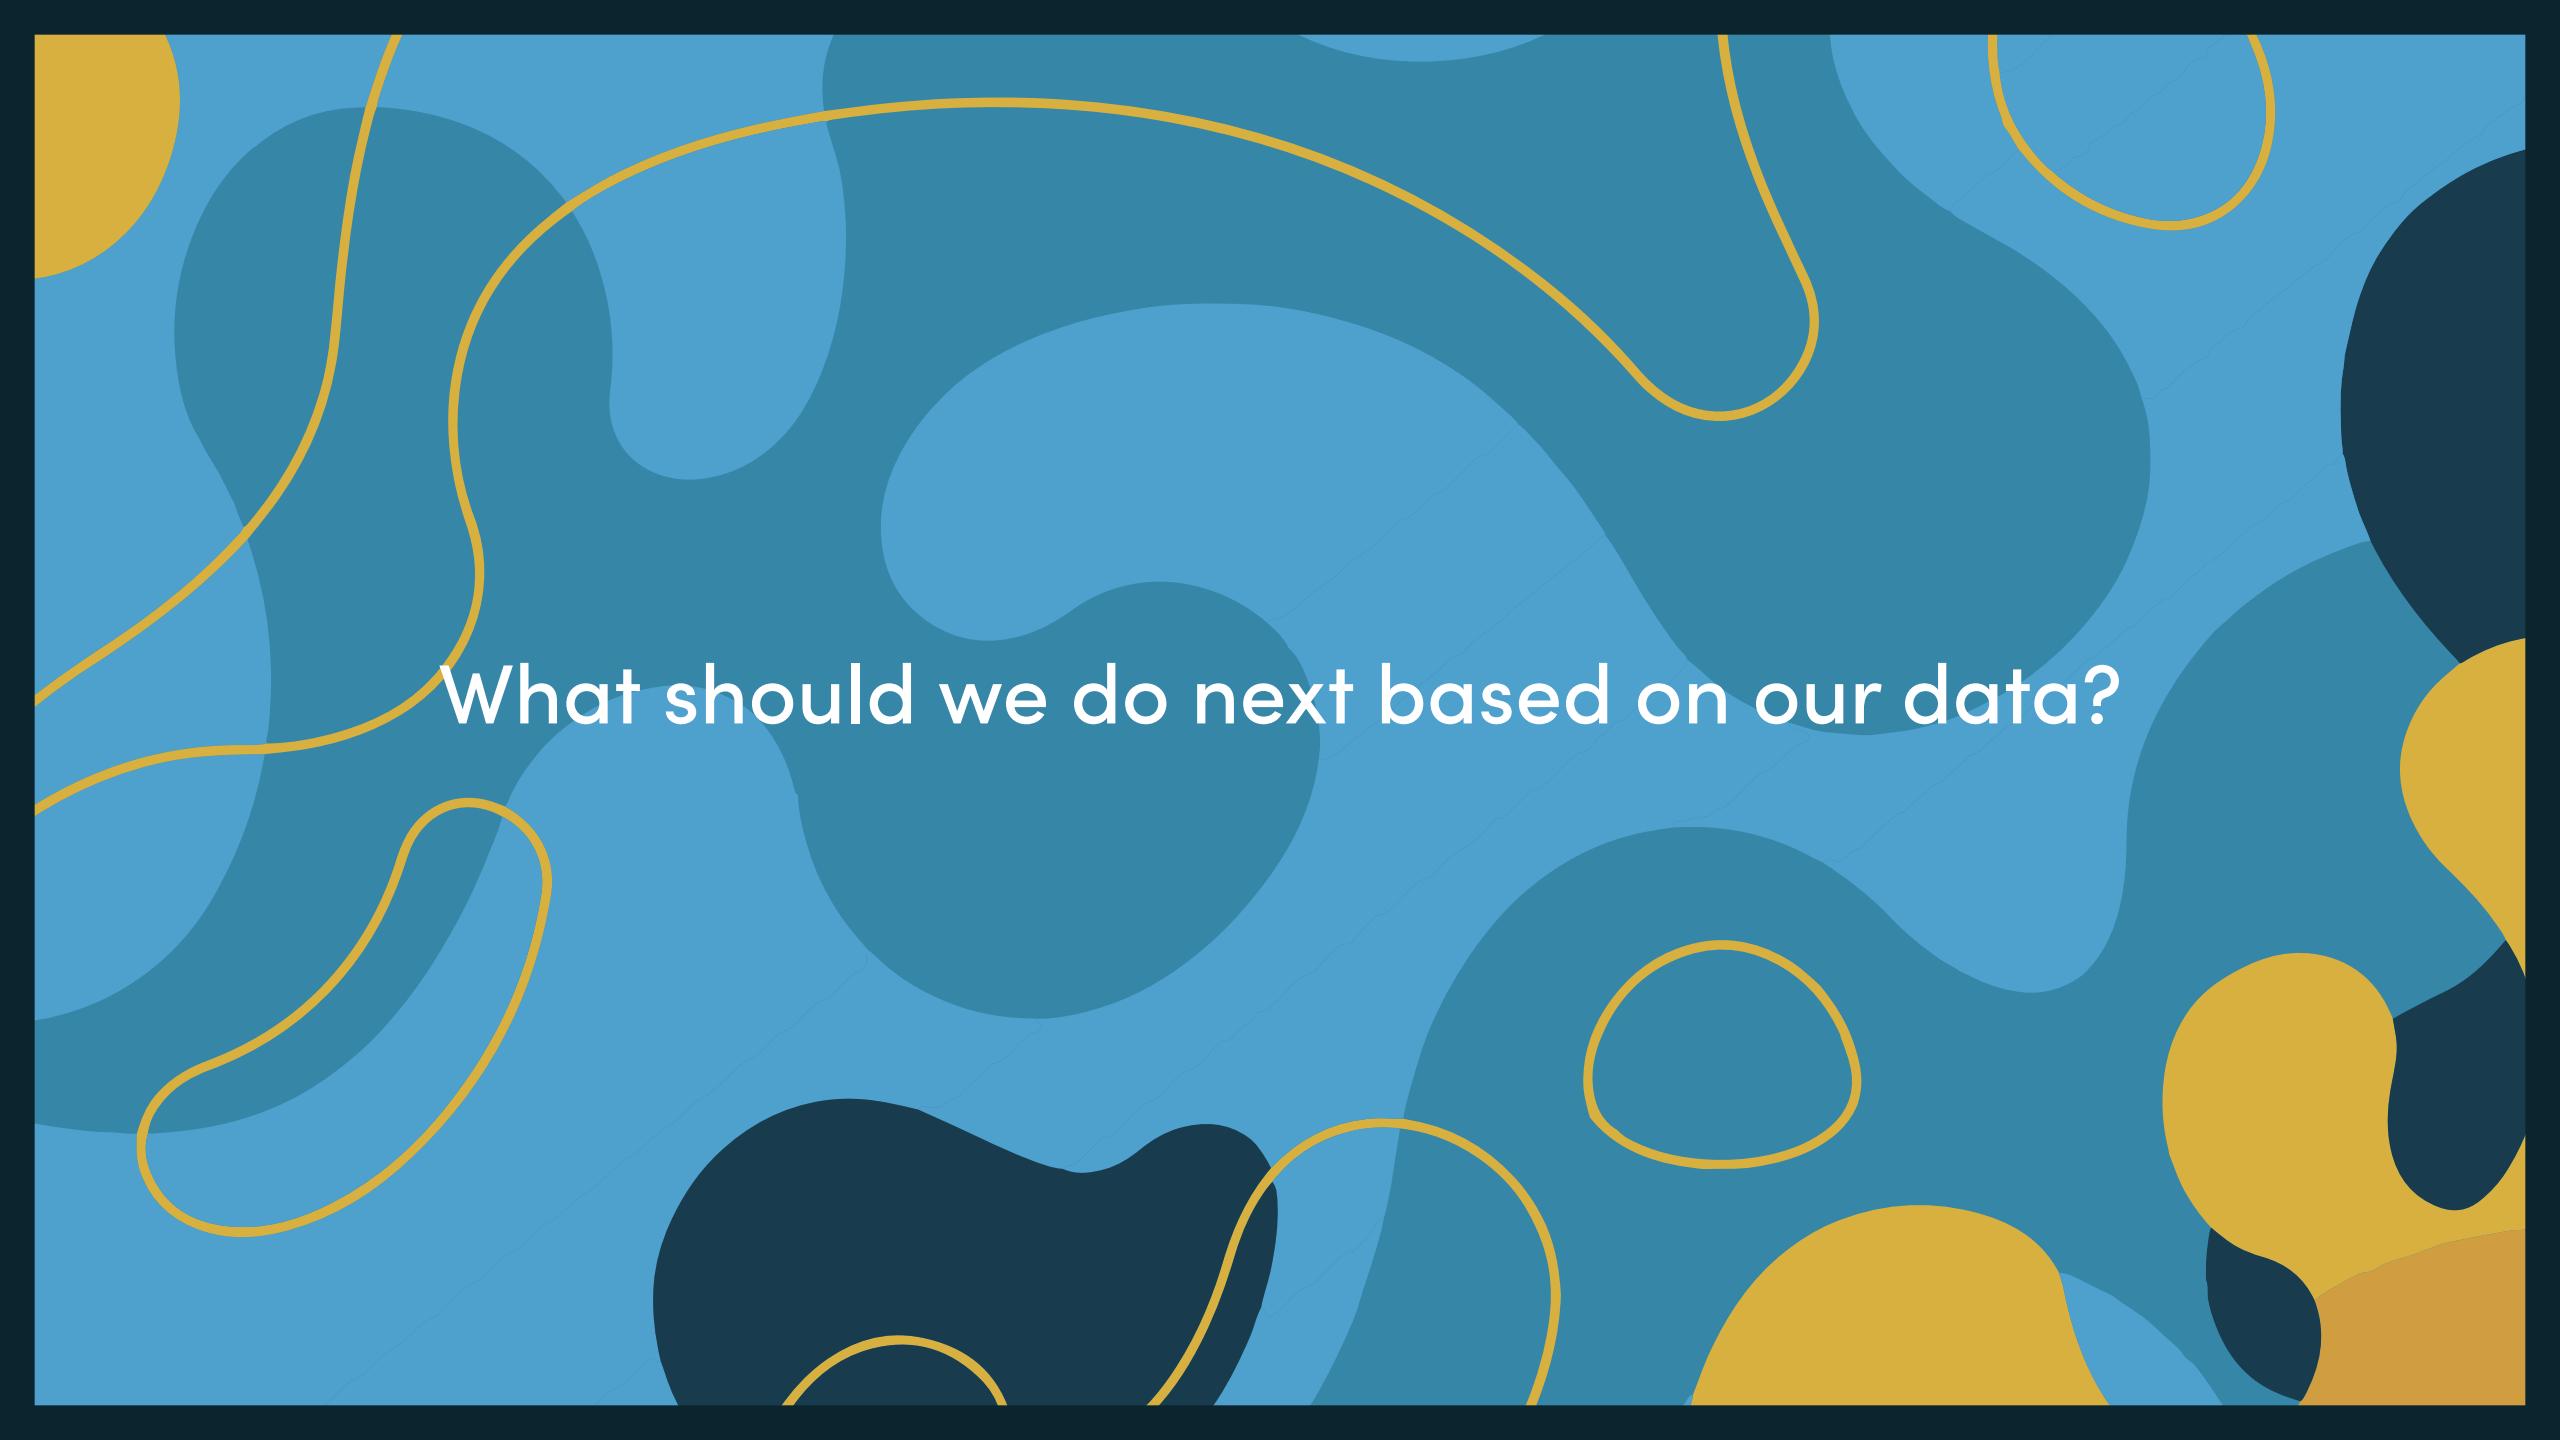

Now's the time to tell *your* story to the class!

What do you think of each others?

What should we do next based on our data?

If your data shows lots of car use

- how can you make people use cars less?

If your data shows your school isn't polluted

- that's great! How can you inspire others?

Let's look at what other schools are doing:

Wee Unicorns Bike Bus

Watch
video

https://www.youtube.com/watch?v=OOGiDZrjo4U&feature=emb_logo

EVERY 2 WEEKS!!

Next JGPS Bike Bus

Friday 7 February 2020

Join us to cycle together safely
from the Blackford area to school.

For details about the route and times, check
www.blackfordsaferoutes.co.uk

@blackfordsafer1

What will you do?

Remember - there's no limit to what you can influence with data.

What will you do next?

Maybe you could use data to convince your parents to let you do something you care about.

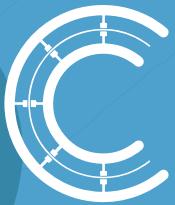

We'd love to know how your data project went!

Please email us and tell us:
